

Experts Group

Expert Group formed from a number of specialized companies in the fields of energy, oil, gas, information technology, communications, medical and engineering services, divided into the following forms:

1. Experts for Integrated Power Solutions Co. Ltd.
2. Experts for Development and Supply of Modern Software and Communications Systems Co. Ltd.
3. Experts for Medical & Engineering Services Co. Ltd.

The objectives, expertise and capabilities of the Group's engineering, scientific, technical, administrative and financial companies are integrated with each other to provide integrated solutions for projects including: Feasibility studies, planning, engineering design, implementation, inspection, operation, maintenance and after sales services, as well as providing engineering, administrative, financial and project management consultancy services based on qualified, distinguished and professional elite of experts, academics, engineers, technicians and administrators.

Integrated Power Solutions

The Company is interested in the design, construction, implementation, operation and maintenance of all types of steam and gas power plants operating in crude and heavy oil, diesel, light gas or natural gas, as well as renewable power plants such as solar and wind power. The Company is also interested in investing, developing and building crude oil, fuel and oil processing systems for power plants to improve the quality of fuel used, increase the efficiency of plants and reduce the negative environmental impact of fuel used. In addition, the company is interested in the design, construction, implementation, operation and maintenance of power transmission and distribution stations, development of electronic control and control systems (SCADA) and development of energy reduction and conservation systems for industrial, agricultural, construction, health, water treatment, lighting, heating and cooling projects. The company is also interested in developing oil and gas transmission and distribution protection systems. The company works in partnership with international specialized

companies. The Company's objectives include the general paragraphs referred to below:

1. Design, supply, implement, operate, maintain and rehabilitate production, transmission and distribution stations for electric power and all service systems and support them.
2. Investment in the construction, operation and maintenance of production plants, transmission and distribution of electrical power and all service systems and maintenance.
3. Design, supply, implement, operate, maintain and rehabilitate crude oil, fuel and oil processing systems for power generation, transmission and distribution stations and all service and maintenance systems.
4. Investment in the construction, operation and maintenance of crude oil, fuel and oil processing systems for power generation, transmission and distribution stations and all service and maintenance systems.
5. Design, supply, implementation and maintenance of energy consumption and conservation systems and components for industrial, agricultural, construction,

- health, water treatment, lighting, heating and cooling projects.
6. Design, supply, implement, maintain and rehabilitate central electronic control and control systems on industrial, agricultural, construction, health, water treatment, lighting, heating and cooling plants and systems.
 7. Preparation of economic feasibility studies and scientific and engineering studies for energy projects, industrial, agricultural, construction, health, water treatment, lighting, heating and cooling.
 8. Providing consultancy and management of energy projects, industrial, agricultural, construction and health projects, water treatment, lighting, heating and cooling.
 9. Preparing and training engineering, technical and administrative cadres for energy projects, industrial, agricultural, construction, health, water treatment, lighting, heating and cooling projects.

Development and Supply of Modern Software and Communications Systems

The company specializes in the development and processing of modern software and communications systems in the fields of designing and developing software and web applications and all programming languages, software and applications of smart devices and mobile phones operating systems for iPhone and Android, which serve a wide range of engineering, scientific, commercial, financial and social networking. The company is also specialized in the design, implementation, maintenance and operation of telecommunication networks and computer networks of all kinds. In addition, the company is interested in the development of systems and software security and protection of information and networks. The company has developed several software systems including:

- (PCost) To calculate the cost of projects.
- (PPIInvCal) To calculate the economic feasibility of energy projects.
- (InfoSec) Security and protection of information.
- (SEMEX) Secure e-mail exchange.
- (Homers) To send text messages over a computer.
- (SSMS) For encrypted exchange of SMS messages.
- (SAR) To document the attendance and absence of students.
- (EBCal) To calculate the value of the electric bill.

The company is also interested in the fields of preparation of feasibility studies and consultations for telecommunications projects, data analysis and management of information and communication technology projects. The company has developed a number of applications for mobile phones such as Chamber and Lamassu.

Medical & Engineering Services

The Expert Company for Medical and Engineering Services is an independent company within the group of experts specialized in providing engineering services for industrial projects, production and distribution projects of electric power, production and processing of fuel (oil and gas), drinking water projects, industrial water and water treatment. The services provided by the company generally include the following:

- Preparation of feasibility studies.
- Preparation of basic and detailed engineering designs for projects.
- Implementation, operation and maintenance of projects.
- After-sale services for devices, equipment and projects.

- Providing engineering, financial and administrative consultancy.
- Project planning and management.
- Installation and maintenance of engineering equipment and devices.

The company is also very interested in providing medical services, which include:

- Trade of medical equipment and spare parts.
- Maintenance of medical devices and equipment.

- Trading of medical consumables except medicines.
- Management and operation of hospitals, medical centers and laboratories.
- Trade of medical laboratory equipment and equipment.
- Maintenance of medical laboratory equipment and equipment.
- Providing engineering and technical consultancy in the field of medical devices, equipment and laboratories.
